

DEMO ANALYSIS - MOCK PREDICTIONS

Id: 06894b38-a686-478c-9980-ca659889e8db

Created At: 2026-09-29T18:01:36.983941+00:00

Inspector: inspector

Variety: Unspecified

Model Version: mock-instance-v2

Grading Spec: ONION-VISUAL-DEMO-v2

Measure	Result
Detected / marked regions	6
Grade A (resolved subset)	0%
Pending review	1
URS	Unavailable
AI Visual Quality Score (unofficial)	83 / 100
Mean model confidence	0.845
Diameter avg / min / max (mm)	32.78 / 32.78 / 32.78

5 resolved Grade A decisions / 6 detections. 1 unresolved decisions excluded; percentage is partial when review is pending.

URS calculation requires the configured official grading specification.

100 - sum(class count × configured penalty) / visually resolved onion count. Not an official grade.

Score weights: {'DAMAGED': 15.0, 'GOOD': 0.0, 'ROTTEN': 30.0, 'SPROUTED': 20.0, 'UNDERSIZED': 10.0}

Weighted deductions: {'DAMAGED': 3.0, 'GOOD': 0.0, 'ROTTEN': 6.0, 'SPROUTED': 4.0, 'UNDERSIZED': 4.0}

Calibration: Area-equivalent diameter; reference and onions must lie in the same plane. Perspective and occlusion cause error.

Measurement method: user_reference_line; reference 50.0 mm; scale 0.500000 mm/pixel; marker or line points [[10, 10], [110, 10]]

Limitations

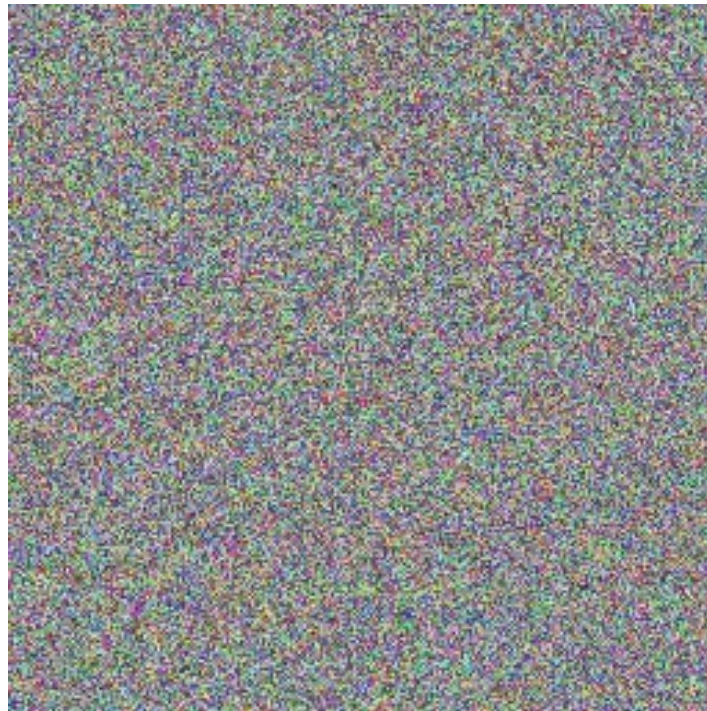

AI detects visible characteristics only. Internal rot, pesticide residue, moisture, firmness, smell, microbial infection and hidden defects cannot be reliably determined from these images.

Physical size needs a reference in the same plane; overlapping or partially hidden onions cannot be measured reliably.

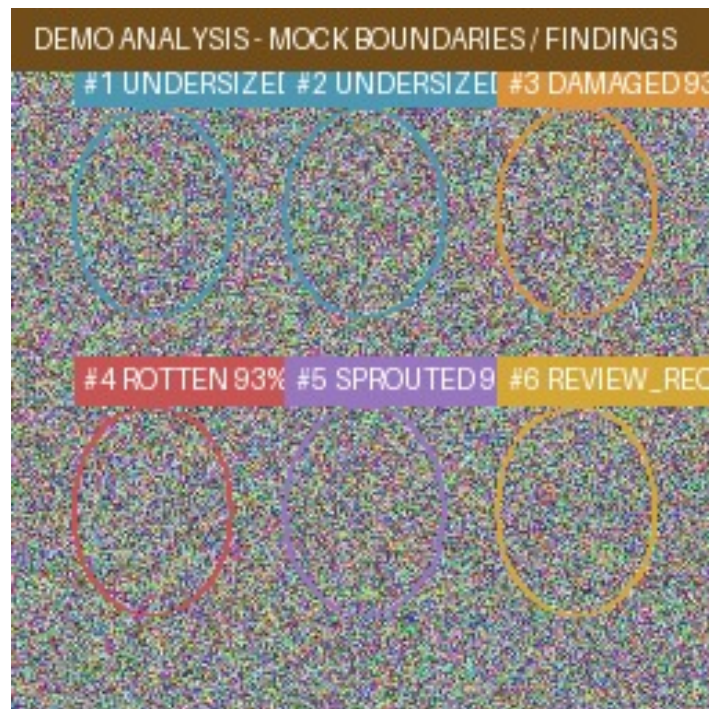

DEMO ANALYSIS: boundaries, classes and confidence are fixed mock predictions unrelated to uploaded image contents. Calibrated mock geometry is still not a real measurement.

Annotated image - mock geometry

Per-onion findings

Class	Count
DAMAGED	1
GOOD	0
REVIEW_REQUIRED	1
ROTTEN	1
SPROUTED	1
UNDERSIZED	2

Onion #1 - UNDERSIZED

Class: UNDERSIZED | Confidence: 93.0% | Diameter: 32.78 mm | Size: Small | Grade A: NOT ELIGIBLE

Width / height: 28.16 mm / 38.4 mm

Region source: demo

Defects: No specific defect finding

Diameter 32.8 mm is below the 45 mm minimum.

Onion #2 - UNDERSIZED

Class: UNDERSIZED | Confidence: 93.0% | Diameter: 32.78 mm | Size: Small | Grade A: NOT ELIGIBLE

Width / height: 28.16 mm / 38.4 mm

Region source: demo

Defects: No specific defect finding

Diameter 32.8 mm is below the 45 mm minimum.

Onion #3 - DAMAGED

Class: DAMAGED | Confidence: 93.0% | Diameter: 32.78 mm | Size: Small | Grade A: NOT ELIGIBLE

Width / height: 28.16 mm / 38.4 mm

Region source: demo

Defects: MECHANICAL_INJURY

Diameter 32.8 mm is below the 45 mm minimum.

Mechanical Injury is not allowed under ONION-VISUAL-DEMO-v2.

Onion #4 - ROTTEN

Class: ROTTEN | Confidence: 93.0% | Diameter: 32.78 mm | Size: Small | Grade A: NOT ELIGIBLE

Width / height: 28.16 mm / 38.4 mm

Region source: demo

Defects: ROTTING

Diameter 32.8 mm is below the 45 mm minimum.

Rotting is not allowed under ONION-VISUAL-DEMO-v2.

Onion #5 - SPROUTED

Class: SPROUTED | Confidence: 93.0% | Diameter: 32.78 mm | Size: Small | Grade A: NOT ELIGIBLE

Width / height: 28.16 mm / 38.4 mm

Region source: demo

Defects: SPROUTED

Diameter 32.8 mm is below the 45 mm minimum.

Sprouted is not allowed under ONION-VISUAL-DEMO-v2.

Onion #6 - REVIEW_REQUIRED

Class: REVIEW_REQUIRED | Confidence: 42.0% | Diameter: 32.78 mm | Size: Small | Grade A: UNRESOLVED

Width / height: 28.16 mm / 38.4 mm

Region source: demo

Defects: No specific defect finding

Diameter 32.8 mm is below the 45 mm minimum.

AI is uncertain about this onion; exclude it from the resolved grading denominator.

Verification

SHA-256 of canonical analysis record (not a digital signature):

057e04064490d768eaffcf1ab4ffc99714702abf832e4ab6f00117fd832442d9

The separate PDF byte hash is supplied by the report endpoint and public verification API. Scan the QR to compare. Grading rules are illustrative, not legally authoritative.
